

ISTA^{MATIC}
VISION PANELS

Vistamatic[®] Max XL

Maximum Length - Maximum Vision

Specifically designed to offer a streamline appearance to any door requiring a full length panel and with all of the benefits expected of a Vistamatic®, the Max-XL dispenses with the need to install two individual panels vertically into a door blank.

Ideal for projects in all sectors not just healthcare, the Max-XL is able to maintain a contemporary feel whilst offering the observation merits associated with all products within the Vistamatic® range.

Incorporating the Patented Integrated Cam Mechanism (Patent No. 2491218) the Max-XL carries our Lifetime Warranty*.

Made to measure, the single panel Max-XL allows discreet observation through the upper area of the panel and is available in a variety of glass options.

DOOR OR WALL HOUSING

STANDARD PANEL THICKNESS 18mm

For full range of glasses please visit our website.

Complies with the Department of Health environmental design principles for adult medium secure units and beyond.

According to Department of Health guidelines;

All doors in patient accessible areas should be fitted with either vision panels or, if the door is within a screen, adjacent glazed panels should be fitted.

Consideration should also be given to the need for vision panels in internal subdivisions, partitions and doorways.

To reduce the risk of failure under attack, vision panels should be constructed with metal surrounds that can be securely fixed into the opening in the door.
