

Vistamatic® VistaSlide
Observation on a larger scale

The VistaSlide Observation Screen

(Registration No. 85/411,995) (Patent pending No. 1118162.5).

As originators of the worlds most specified vision panels Vistamatic® have strived to maintain a position as innovators and manufacturers of products aimed to assist in the discreet monitoring and observation of patients and environments by way of natural surveillance.

Developed from an original 1970s design Vistamatic® have created the new VistaSlide secure glazed observation screen, adding a new dimension as to how such a device can operate.

The new VistaSlide observation screen is perfectly at home in a door or in its larger format when installed in a wall or partition in order to observe and monitor corridor or nursing station activity.

Operated by our re-engineered Integrated Spindle/Cam Mechanism (Patent No. 2491218) this exciting new innovation from Vistamatic® is available in a full range of glass integrities from Fire rated through to X-ray and beyond and is covered by our unique Lifetime Warranty*.

The VistaSlide is an observation screen that operates in a lateral fashion with the linear design moving vertically from side to side within the confines of the metal framed or sealed unit.

Visually the panel presents itself exactly in the way that all Vistamatic® products do except that the linear design runs across the screen vertically.

In a closed position the panel presents itself with a completely obscured viewing aspect whilst in the open position the lines move across the screen presenting a viewing aspect of approximately 25mm between each one.

The VistaSlide observation screen is available in a variety of sizes in either square or oblong and can be specified as 30min Fire rated or standard non fire rated. Additionally the VistaSlide may be specified as a bespoke product manufactured to your exact requirements.

*Against faulty manufacture.

Certification of quality management systems to ISO 9001::2008
BS476: Part 22: 1987 or BE EN 1643-1:2000

ISTASLIDE
OBSERVATION SCREENS
from Vistamatic®

Vistamatic® built to last a Lifetime

Complies with the Department of Health environmental design principles for adult medium secure units and beyond.

According to Department of Health guidelines;

All doors in patient accessible areas should be fitted with either vision panels or, if the door is within a screen, adjacent glazed panels should be fitted.

Consideration should also be given to the need for vision panels in internal subdivisions, partitions and doorways.

To reduce the risk of failure under attack, vision panels should be constructed with metal surrounds that can be securely fixed into the opening in the door.
