

## The Hillingdon Hospital, Jubilee Building

**Client //** Lloyd Worrall / Western Building Systems  
**Name //** Hillingdon Hospitals NHS Foundation Trust  
**Type of Build //** New Build  
**Location //** Greater London  
**Products installed //** Vistamatic

### The Project

A new multi-storey modular ward building was needed to support the longer-term development of Greater London's Hillingdon Hospital. This bespoke temporary building will provide specialist paediatrics, stroke care, rehabilitation and dementia services.

## Vistamatic

Key contractor Lloyd Worrall was tasked with providing doorset and ironmongery for the new build project. They recommended Vistamatic vision panels to be the observation and privacy solution.

Vistamatic provided 67no 200 x 1245 Vista Max XLs to the project. These non-fire rated panels were specified to be dual- side operated. Additionally, a small number of both similar and smaller FD 30 panels were also supplied. The Vistamatic units were installed in the consulting and treatment room doors, allowing large viewing aspects, while still offering concealment and security.

Lloyd Worrall National Account Manager Andrew Moore said, "As usual the project was not short of its hidden hurdles, one being time constraints, but the Vistamatic Package was supplied correctly and on time. The Doorsets look great, both the Contractor and Hospital are very happy with the completed project."

Mark Nash, Vistamatic Managing Director, said, "We are proud to work with Lloyd Worrall on this project. We maintain the highest quality for our vision panels, and we know they do the same for their doorsets. We are sure the new Jubilee Ward will be a great addition to the patient experience at Hillingdon Hospital."
